TWO MINUTE TRAINING

SUBJECT: Generator Weekly Inspection Log Documentation – Federal vs. WA State

Q: What are the Federal and the State of Washington generator requirements for documenting less-than-90-day container inspections and any subsequent corrective actions?

A: Per [40 CFR 262.34](#), a generator may accumulate hazardous waste on-site for 90 days or less without a permit provided that (among other things), the waste is placed in containers and the generator conducts at least weekly inspections. The generator inspection regulations referenced from 40 CFR 262.34 to [40 CFR 265.174](#) state that inspections must include looking for leaking containers and deterioration of containers. 40 CFR 265.174 includes a comment to see [40 CFR 265.171](#), “Condition of containers” for remedial action required if deterioration or leaks are detected. However, there is no requirement to document corrective actions taken. Therefore, generators subject to Federal or Federally equivalent State regulations are not required to document weekly inspections or subsequent corrective actions. However, it is a best management practice to ensure that regulatory compliance can be demonstrated to regulators and documentation is a good demonstration.

Per the Washington Administrative Code (WAC), [173-303-200](#), Washington State generators may also accumulate dangerous waste on-site for 90 days or less without a permit provided that (among other things), the waste is placed in containers and the generator conducts at least weekly inspections looking for leaking containers and deterioration of containers and the containment system. Note that the WAC reference to inspecting the containment system is more stringent than the Federal requirements which only inspect the containers. The regulation concerning generator inspections referenced from WAC 173-303-200 to [WAC 173-303-630\(6\)](#), includes wording stating that the generator must keep an inspection log noting the observations made and the nature of any repairs or remedial actions. Therefore, Washington State generators, unlike Federal generators, are required to document weekly inspections and any subsequent corrective actions taken.

The State of Washington has chosen to be more stringent than the Federal regulations by requiring documentation of inspections performed and corrective actions taken.

SUMMARY:

- Generators subject to Federal or Washington State regulations can accumulate hazardous/dangerous wastes on-site for 90-days or less without a permit, provided that (among other things), at least weekly inspections are conducted.
- Federal regulations require that generators look for leaks and deterioration but do not require documentation of inspections performed or corrective actions taken.
- Washington State regulations also require generators to look for leaks and deterioration but do require documentation of inspections performed and corrective actions taken.

Pertinent regulations from 40 CFR 265 and WAC 173-303 are attached to the e-mail. If you have any questions, please contact me at “Paul_W_Martin@rl.gov” or at (509) 376-6620.

TWO MINUTE TRAINING - ATTACHMENT

SUBJECT: Generator Weekly Inspection Log Documentation – Federal vs. WA State

40 CFR 262.34 Accumulation time.

(a) Except as provided in paragraphs (d), (e), and (f) of this section, a generator may accumulate hazardous waste on-site for 90 days or less without a permit or without having interim status, provided that:

(1) The waste is placed:

(i) In containers and the generator complies with the applicable requirements of **subparts I, AA, BB, and CC** of part 265;

Subpart I—Use and Management of Containers

40 CFR 265.174 Inspections.

At least weekly, the owner or operator must inspect areas where containers are stored, except for Performance Track member facilities that must conduct inspections at least once each month, upon approval by the Director. To apply for reduced inspection frequency, the Performance Track member facility must follow the procedures described in §265.15(b)(5) of this part. The owner or operator must look for leaking containers and for deterioration of containers caused by corrosion or other factors.

[Comment: See §265.171 for remedial action required if deterioration or leaks are detected.]

40 CFR 265.171 Condition of containers.

If a container holding hazardous waste is not in good condition, or if it begins to leak, the owner or operator must transfer the hazardous waste from this container to a container that is in good condition, or manage the waste in some other way that complies with the requirements of this part.

WAC 173-303-200 Accumulating dangerous waste on-site.

(1) A generator, not to include transporters as referenced in WAC 173-303-240(3), may accumulate dangerous waste on-site without a permit for ninety days or less after the date of generation, provided that:

(b) The waste is placed:

(i) In containers and the generator complies with **WAC 173-303-630** (2), (3), (4), (5), **(6)**, (8), (9), (10), and 40 CFR Part 265 Subparts AA, BB, and CC incorporated by reference at WAC 173-303-400 (3)(a)...

WAC 173-303-630 Use and management of containers.

(6) Inspections. At least weekly, the owner or operator must inspect areas where containers are stored, looking for leaking containers and for deterioration of containers and the containment system caused by corrosion, deterioration, or other factors. **The owner or operator must keep an inspection log including at least the date and time of the inspection, the printed name and the handwritten signature of the inspector, a notation of the observations made and the date and nature of any repairs or remedial actions taken. The log must be kept at the facility for at least five years from the date of inspection.**
